What is claimed is:

1   1. A method of assisting a person navigating locations on a hyperlinked

2 network, the method comprising:

3   (a) constructing a computer program with means for determining the

4 address on said hyperlinked network of a location addressed by a browser;

5   (b) obtaining data about said person;

6   (c) constructing an Agent Link comprised of an Agent Website address

7   on said hyperlinked network, said data, and said computer program;

8   (d) construction of an Agent Website at said Agent Website address,

9 with means for extracting the information carried in the link referencing it,

10 analyzing said information, and presenting said person a response.

11   (e) presenting said person said Agent Link and instructions to save it

12 and use it later;

13   2. The method of claim 1, wherein said response is automatic redirection of

14 said person to another network location.

15   3. The method of claim 1, wherein said response is automatic return of said

16 person to the same network location, but with additional information communicated

17 to said same network location.

18   4. The method of claim1, wherein said response is a message and a plurality

19 of links to network locations.

20   5. The method of claim 1 wherein said response is an inquiry of said user and

21 a means to record and save inputs from said user.
